FAVORITE
THINGS OF
2019**

@VETANESTHESIANERDS

Every year we like to put together a handpicked list of our favorite things, based on our own experience with the product, our members feedback and the innovation of the product. Even though we have some products from sponsors, this is not a criteria we use to evaluate whether a product makes the list or not. This year did not let us down! Please also check out our past years lists as they represent some amazing products we still love.

- 1). Handbook of Small Animal Regional Anesthesia and Analgesia Techniques: While this book isn't new, it is a great addition to the clinic or personal library. The section on local and regional anesthesia is of particular utility. <https://onlinelibrary.wiley.com/doi/book/10.1002/9781119159490>
- 2). Pedi- pop: We love simple devices that make life easier and safer for our patients. If you struggle with people leaving the pop-off valve closed- look no further. <https://www.pedipopvalve.com>
- 3). Practivet Syringe Pump: One of the most frequent questions we get is what syringe pump to get. This is our preference with a familiar design, intuitive operating panel and great customer service this pump is a great addition. <https://www.pRACTIVET.com>
- 4). 10ml vials of NOCITA: With systemic pain management drugs becoming difficult to get local and regional techniques are more popular than ever. Labeled for cats and dogs NOCITA is one of our favorites by providing pain relief for 72+ hours when used correctly. <https://nocita.aratana.com>
- 5). Vetamac "SafeSigh" Manometer: This is the best, most affordable gift you can give your team and ensure patient safety. #gamechanger <https://www.vetamac.com/store/SafeSigh-Non-Rebreathing-System-with-Manometer-p145589584>
- 6). Simbadol: What can we say? Simbadol (Buprenorphine 1.8mg/ml) was originally formulated for 24 hours of pain relief in cats but its utility is unlimited. <https://www.zoetisus.com/products/cats/simbadol/home.aspx>
- 7). ElleVet Sciences CBD/CBDA: With hundreds of CBD products on the market, limited pain medications available for chronic discomfort and the science to prove it, this is the hemp product of choice. <https://www.ellevetsciences.com>
- 8). Masimo Rad-97 with Nomo-line: We love our gadgets, and this is the newish kid on the block. Masimo products have made our list every year based on their innovate approach, excellent technology and fantastic customer service. <https://www.masimo.com/products/continuous/rad97-capnography/>
- 9). Jurox *Think Anesthesia* website: We all love CE and more so if free! Jurox's dedication to educating the veterinary community stood out and deserves to be listed. <https://jurox.com/us/think-anesthesia>
- 10). Anesthesia and Pain Course: Are you a credentialed veterinary technician looking for advance's anesthesia and pain management training in a small group setting? This is the course for you! Learn anesthesia and pain management techniques at the same level your veterinarian colleagues did in school- and then some! This course also qualifies for CE requirements need to obtain a CVPP, VTS- Anesthesia & Analgesia and VTS- Lab Animal Medicine credentials. <http://registernvc.vetbloom.com>
